Component Design

C. Stijlaart

1. Components

To create the system, different components will work together. To outline each component and their role, in [Table 1](#) an overview is given. In [Figure 1](#) the relation between the different components are outlined.

Table 1. Component Description

Component	Description
Controller Unit (CU)	The CU serves as the central processing unit for the system.
Environmental Data Unit (EDU)	The EDU collects data from the system’s environment.
Database (DB)	The DB stores and manages data generated by the system.
Interface (IF)	The IF component provides an application interface (C++ or python) for external interactions with the system.
