# 1. Context

This document outlines the personas developed for the group project in the Minor AI for Society course. As each individual in the group has a different background and perspective, we each created a persona that represents our own views and experiences. These personas will be used to guide the development of our project and ensure that we are creating a solution that is inclusive and considers the needs of a diverse range of users.

## 2. Personas

### 2.1. Persona: Casey

#### 2.1.1. Basic Information

**Name:** Casey

**Age:** 25

**Gender:** Male

**Occupation / Study:** ICT & Technology student at Fontys University of Applied Sciences

**Location:** Den Dungen

**Living Situation:** with parent

#### 2.1.2. Background & Context

##### Short description of daily life:

My daily life includes either working on my college degree. Besides college, I also have a part\*time job at a local supermarket. Next to these two main activities, I also spend a lot of time behind a screen, whether it be for entertainment, social media, or gaming.

##### Typical day structure:

I tend to sleep in, and after work on college related tasks, I usually spend my free time on my phone or computer.

##### Relationship with technology:

I am an heavy user of technology, especially smartphones and computers. I rely on them for both work and leisure activities, and I often find myself spending several hours a day on these devices.

#### 2.1.3. Goals & Motivations

##### Primary Goal:

My primary goal is to reduce my screen time and improve my focus on tasks, especially when it

comes to my studies and work. I want to be able to manage my time better and avoid getting distracted by my phone or computer.

### **Secondary Goals:**

My secondary goals include improving my sleep quality by reducing late night screen time, and finding a better balance between my online and offline activities.

### **Motivations:**

I care about these goals because I want to be more productive and successful in my studies and work. I also want to improve my overall wellbeing by reducing the negative effects of excessive screen time, such as poor sleep and decreased focus.

## **2.1.4. Phone Usage Behavior**

**Average Screen Time:** 6 hours per day **Pickups per Day:** 80 times **Most Used Apps:** TikTok and Reddit **Usage Patterns:** frequent pickups throughout the day, with increased usage in the evenings and late at night. **Trigger Moments:** when i am bored, during breaks, or when i need to decompress at the end of the day.

## **2.1.5. Pain Points**

### **What frustrates me about my phone usage:**

- Difficulty focusing on tasks due to constant distractions from notifications and apps.
- Poor sleep quality due to late\*night screen time.

### **Consequences:**

- Loss of focus
- Poor sleep

## **2.1.6. Needs & Expectations**

### **What do I expect from the app:**

- Effective nudges that help me reduce my screen time and improve my focus.
- Personalization based on my usage patterns and preferences.

### **Preferences:**

- Strict nudges that block access to distracting apps during certain times of the day.
- Visual feedback on my usage patterns and progress towards my goals.
- Reminders to take breaks and engage in offline activities.

## 2.1.7. Personality & Behavior Type

### Persona Type:

- ☐ ~~The Addict (high usage, low control)~~
- ☐ **The Balanced User**
- ☐ ~~The Goal-Oriented Improver~~
- ☐ ~~The Resistant User~~

### Traits:

- Discipline level: ~~low~~ / **medium** / ~~high~~
- Openness to change: ~~low~~ / **medium** / ~~high~~
- Response to nudges: ~~ignore~~ / **reacts** / ~~adapts~~

## 2.1.8. Preferred Nudges (JITAI)

### Best timing for intervention:

- After 30 minutes of constant usage
- During late night use
- During frequent pickups

### Effective nudges:

- Notifications with usage insights
- Reminders to take breaks
- Reflection prompts
- App blocking / friction

### What does NOT work:

- Gentle reminders that can be easily ignored.
- Generic advice without personalization.
- Nudges that do not provide actionable insights or feedback.

## 2.2. Persona : Laelie

### 2.2.1. Basic Information

**Name:** Laelie

**Age:** 22

**Gender:** Female

**Occupation / Study:** Applied Science – Materials Science

**Location:** Eindhoven

**Living Situation:** with partner

### 2.2.2. Background & Context

#### Short description of daily life:

I am a student and a mom, and I really enjoy spending time outdoors. In the past, I used to scroll on social media a lot, but recently I decided to quit, and it has made me feel much better. I feel like I have more time and can truly connect with people in real life again. I've also started reading books about social media addiction, which helped me realize how much I was actually addicted to scrolling.

#### Typical day structure (work/study, free time):

- **Morning:** bring my daughter to daycare, go to school/work
- **Afternoon:** working
- **Evening:** pick my daughter up, cooking, eating, go to sleep

#### Relationship with technology: Moderate

Short explanation: Lately i don't scroll that much anymore since I am aware about the effect it has on my life

### 2.2.3. Goals & Motivations

**Primary Goal:** improve concentration skill

**Secondary Goals:** connect more with people in real life.

#### Motivations:

- Productivity
- Mental health
- Sleep improvement
- Social balance

## 2.2.4. Phone Usage Behavior

**Average Screen Time:** 2,5-3 hours per day

**Pickups per Day:** 120 per day

**Most Used Apps:** whatsapp, messages

**Usage Patterns:** short checks

**Trigger Moments:**

- Boredom
- Stress

## 2.2.5. Pain Points

**What frustrates you about your phone usage:**

- Difficulty to focus
- Distracting
- Once you are scrolling, you don't want to stop.

**Consequences:**

- Loss of focus
- lack of control

## 2.2.6. Needs & Expectations

**What you expect from the app:**

- Clear insights (simple dashboard)
- Personalized suggestions
- Nonintrusive nudges

**Preferences:**

- Subtle interventions
- Visual feedback

## 2.2.7. Personality & Behavior Type

**Persona Type:**

- ☐ ~~The Addict (high usage, low control)~~
- ☐ **The Balanced User**
- ☐ ~~The Goal Oriented Improver~~

- ~~☐ The Resistant User~~

**Traits:**

- Discipline level: ~~Low~~ / **Medium** / ~~High~~
- Openness to change: ~~Low~~ / ~~Medium~~ / **High**
- Response to nudges: adapts

## 2.2.8. Preferred Nudges (JITAI)

**Best timing for intervention:** <examples>

- After X minutes of usage
- During late night use
- During frequent pickups

**Effective nudges:** <examples>

- Notifications (e.g., “You’ve picked up your phone 20 times in 1 hour”)
- Reflection prompts
- Goal reminders
- App blocking / friction
- Slower scrolling
- Screen fading

**What does NOT work:**

- Front camera
